*Toshiba Digital Inverter Classic brings affordable, highly effective air conditioning to light commercial workspaces*

*Classic in design yet premium in adaptability*

**London, March 13, 2023** – Toshiba Air Conditioning is unveiling a new addition to its established and proven Digital Inverter range. Featuring a best in-class size-to-efficiency ratio, the compact and cost-effective Digital Inverter Classic is ideal for cooling and heating any light commercial workspace. Toshiba Air Conditioning is a part of Carrier Global Corporation (NYSE: CARR), the leading global provider of healthy, safe, sustainable, and intelligent building and cold chain solutions.

The Digital Inverter and Super Digital Inverter series have been prominent in the market since launching in 2003, with Toshiba Air Conditioning constantly updating the technology to build a reputation for market-leading quality and reliability. The company has applied all of this evolution to its new Digital Inverter Classic, which features an inspired and cost-efficient one-fan chassis design that lacks nothing in performance. Appealing to many businesses impacted by economic challenges, this optimised solution is ideal for shops, restaurants, beauty salons, dentists, pharmacies and small offices, for example, in fact any commercial premises from 30 to 160m<sup>2</sup>.

Toshiba Air Conditioning is offering a highly adaptable and flexible range of models from 2 to 6HP, with single- or three-phase electrical connections. The compact one-fan outdoor unit is ideal for even the most restricted of spaces without any compromise in energy efficiency: A++ for cooling and A+ for heating. Three types of indoor unit are available to suit almost any light commercial project. The innovative four-way cassette IDU features a new design of diffuser panel with occupancy sensor compatibility and PM2.5 air filtration. With its functional design, the ducted IDU provides available pressure to 150 Pa for long duct distances. Finally, the high-wall IDU with its ultra-pure filter is ideal for budget-conscious projects.

In summary, the new Digital Inverter Classic offers an economical yet effective solution for the cooling and heating of light commercial premises, with all the usual expectations. Reliable. Efficient. 100% Toshiba Air Conditioning.
